## Wild Goose Vineyards & Winery

*It all began in early 1983 when founder Adolf Kruger purchased a barren piece of land east of Okanagan Falls. Upon his return to his newly purchased property, he discovered a large flock of Canada geese feeding amongst the tumbleweeds, boulders, and rubble. As he approached, the flock of geese took flight and flew to the north. This vision inspired Adolf to call the property Wild Goose Vineyards.*

*Wild Goose Winery was the seventeenth winery in BC and was established in June 1990. The winery started producing Riesling, Gewurztraminer, and Marechal Foch. Consumers quickly took to the concept of small wineries and flocked to the Okanagan Valley to spend time on the beach, play a little golf, and tour wineries. Over time Wild Goose would establish itself as one of the premium small producers of VQA wines. Customers turned to friends and many still to this day visit the winery.*

### **2021** Wild Goose Vineyards Stoney Slope Riesling

\$60 bottle

Produced from a few select SW rows at the home vineyard of Wild Goose, from vines planted in 1984, this wine is grown in the uniquely coarse & gravelly soils of the Okanagan Falls sub geographical area. The aromatics of this wine begin with citrus, lime, and licorice. On the palate, intense flavours of ripe green apple, melon and wet stones. The wine is balanced with beautiful fruit and a cleansing crispness. This is a Wild Goose wine that just gets better and better with age.

### **2023** Wild Goose Vineyards Gewürztraminer

The Wild Goose Gewurztraminer style is sweeter and rounder. A small crop left only Estate fruit to be picked, increasing the purity of fruit in the wine. Floral jasmine on the nose followed by intense orange, sweet honeysuckle, and spicy ginger streaks underneath. Juicy, sweet fruit fills the mid-palate into the finish.

### **2019** Wild Goose Vineyards *Late Harvest* Gewürztraminer

\$60 bottle 375ML

This late harvest wine is made from Gewürztraminer grapes left on the vine longer than usual, allowing for the concentration of flavours and a sweetening of the juice. This wine is a perfect digestif after a wonderful meal when you are craving something semi-sweet to put an exclamation mark on a great night. With its golden colour this wine should be served chilled (7-13 C) to capture the lilac, lavender, baked apricot on the nose, and the honey, caramel, and marmalade on the palate.

## Vineyard & Farming Practices

*Upgrades to our irrigation systems have improved our energy efficiency by a factor of approximately 2, as it allows us to use much less water for growing wine grapes, something that the old system was not capable of. This is a huge improvement in efficiency and promotes water conservation with a parallel reduction in our consumption of electrical power.*

**Solar Energized Water Probes:** *Throughout the vineyard, there are solar energized probes that automatically test the soil at root depth and wirelessly report the true watering needs of the vines back to the office. This ensures that we only use the water that we need.*

**Integrated Pest Management (IPM)** *is a long way of saying that we try to use friendly insects to battle other insect pests. For example, spider habitat is boosted by simply not cutting the cover crops between the vine rows regularly. Instead, these rows are cut on alternating periods thus providing continuous habitat and encouraging a thriving spider population. In turn, spiders eat aphids and mites that are pests to the grapes.*

**Organic Techniques:** *A variety of techniques have been invoked to bring the vineyard closer to the “organic” ideal. One such technique is the recycling of grape “pomace”, the material made up of grape skins and seeds that are expelled from the press after the juices and wines are extracted. The pomace is taken to a local feedlot where it is mixed with manure and returned to the vineyard in the spring, as a compost to enhance the organic material in our sandy soils.*

**Sprays:** *Using environmentally safe, biodegradable fertilizers and chemicals, none of which persist in the soils. Long-term sustainability of this beautiful farmland is our principal objective.*

**Cover crops:** *Planting cover crops of mustard between each row of grape vines, encourages the growth of preferred invertebrates and supports a natural mechanism of pest control. Interestingly, the cover crop also reduces the evaporation rate of irrigation water and puts essential nitrogen into the soil.*

**Compost:** *Mulching all organic waste generated during pruning and vine maintenance and leaving it on the ground to compost naturally among the vines adds organic matter to the vineyard topsoil.*

**Education and training:** *Sensitizing and educating vineyard workers and visitors to the area’s unique ecological features is an ongoing program.*

## **Building Environmental Sustainability**

**The Building Design** makes use of the steeply sloping hillside which is largely unusable for farming, by putting most of the production and storage facilities underground.

*This design feature has substantially reduced the building footprint, leaving more surface area for farmland and other wine-related uses.*

**Solar heating:** All of the hot water for the offices and Guest House space (including the pool and hot tub) comes from the solar panels that cover the roofs of both buildings, greatly reducing the need for onsite heat generation.

**Geothermal:** All of the Guest House & office HVAC, plus a portion of the hot water is generated from our extensive ground-sourced geothermal system.

**Underground cellars:** We have built over 12,000 sf of underground barrel cellars that provide natural (ground temperature) cooling during the summer and natural warmth during the winter for aging the wine. We do not need to heat or cool using electrical or fossil fuel energy as would be the case for an above-ground barrel facility.

**Gravity Flow Winery:** A side benefit of this multi-level, underground plan is that the wine-making process uses gravity to move the wine through the various stages from top to bottom. By not using pumps to move the wine through the process, not only is energy saved, but the process results in higher-quality wines.

**Heat Exchangers:** All make-up air ventilation passes through heat exchangers so that heat (in winter) or cool (in summer) is not lost to the environment with each air change.

**Building Efficiencies:** All buildings have been constructed to the highest level of thermal and electrical efficiency and we believe that the new Guest House meets or exceeds the LEEDS standards for existing buildings, a new American measure of environmental efficiency.

**Low Flush Toilets:** All toilets on the premises are certified low flush.

**Dark Sky Exterior Lighting:** All of our exterior lighting is DARK SKY approved, reducing light pollution.
